Projects

DevLens AI - Intelligent Codebase Explorer (FastAPI + LangChain/RAG) Github Present

- Architected an async **5 stage repository ingestion pipeline** using **Celery** and **Redis**, processing **100MB/500+ files** GitHub repos in under 3 minutes with **distributed task queuing**, retry logic, and rate-limit handling across parallel workers, backed by **PostgreSQL**.
- Built an AST aware semantic chunker for **Python, JavaScript, and TypeScript**, **extracting 85%** of meaningful code symbols (functions, classes, modules), outperforming naive line-based splitting for **RAG accuracy**.
- Integrated **LangChain agents** over a structured knowledge graph to ground LLM responses in parsed code data, **enabling hallucination free natural language queries** over codebases, streamed to a **TypeScript** dashboard via **WebSockets**.

Lantern - Open Source APM Platform (Node.js + InfluxDB + Socket.IO) Github Live Mar'26

- Built Lantern, an open source APM platform for Node.js delivering real time latency, error rate, throughput, and system health monitoring with sub 10ms collector response time.
- Designed a zero overhead SDK that batches metrics asynchronously every 2s via a BullMQ backed Redis queue, decoupling metric collection from the request response cycle.
- Built a live **WebSocket** dashboard with real time RPM charts, **p95 latency endpoint rankings**, and a detailed error feed.

Voxa - Real Time Collaborative Workspace (MERN + WebRTC) Github Live Jan'26

- Engineered a full stack, real time collaboration platform featuring an infinite whiteboard (Fabric.js) and integrated P2P voice communication.
- **Optimized frontend performance** by decoupling heavy canvas state from standard React component state, **eliminating unnecessary re-renders** during high frequency drawing events.
- Built a secure **REST API** and WebRTC signaling server with Express and Node.js, featuring resilient Google **OAuth and JWT-based authentication** for persistent workspaces in MongoDB.

Training

Data Structure and Algorithm by SkillStone Certificate Jun'25 - Aug'25

- Completed 2 months of intensive training in data structures (arrays, linked lists, stacks, queues, trees, graphs) and algorithms using C++, focusing on time and space complexity analysis.
- Applied Greedy & graph algorithms to real world scenarios, optimized solutions under constraints.

Certification/Achievement

- **AWS** Cloud Practitioner Essentials Certification.
- IBM Certification in Fundamentals of **AI agents using RAG and LangChain**.
- Solved **400+ problems** on **LeetCode**.
- Maintaining a **122 day active coding streak** with a maximum streak of 200 days, demonstrating consistency and disciplined daily practice.

Technical Skills

Languages: C/C++, JavaScript, TypeScript, Python
Frameworks & Library: React.js, Next.js, FastAPI, Express.js, LangChain, Tailwind CSS
Backend/Infra: Celery, Redis, BullMQ, Socket.IO, WebSockets, WebRTC
Databases: MongoDB, MySQL, PostgreSQL
Cloud & DevOps: AWS, CI/CD, Docker, Git/GitHub Actions

Education

Lovely Professional University 2023 – 2027
B-Tech in Computer Science and Engineering

- CGPA: **7.81/10**
- Courses: **DSA, Object-Oriented Programming(OOP), DBMS, CN, Operating System**
